Customer Interactions with Store Layout

Thank you for participating in the Customer Interactions with Store Layout competition! This document will give background information on the files available and the delivery expectations.

If you have any questions, please reach out on the Hackathon Hotline Discord channel.

Within the Customer Interactions with Store Layout zipped folder, you will find a video clip. The text in the lower right corner indicates the date and time. Please assume that the area shown in the video is divided into 8 sections, as indicated below.

Your project should track individuals shopping in this area and generate a stream of data with entry and exit times. The results should look similar to the example below.

Person	Section	Entry Time	Exit Time
P1	A1	8/2/2021 11:00:05am	8/2/2021 11:00:55am
P1	A2	8/2/2021 11:00:55am	8/2/2021 11:01:35am

Good Luck!
